

AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

Claim 1 (currently amended): A method for enhancing bolt fastening, the method being employed to improve fastening of a plate of a LCD module, the steps of the method comprising:

bending an edge portion of the plate so as to fold part of the edge portion over an adjacent and consecutive part of the edge portion ~~overlap~~ and to form a plurality of layers of the plate in a predetermined screw hole position; and

forming at least one screw hole in the predetermined screw hole position.

Claim 2 (original): The method of claim 1, wherein the predetermined screw hole position is located on an upper, lower, or side edge of a frame.

Claim 3 (original): The method of claim 1, further comprising a fastening layer applied in a gap between said plurality of layers of the plate.

Claim 4 (original): The method of claim 3, wherein the fastening layer is a double-sided adhesive tape, an adhesive material layer, adhesive glue or plastic rings.

Claim 5 (original): The method of claim 1, wherein the screw hole is forming by punching.

Claim 6 (currently amended): A bolt fastening structure employed to improve fastening of a plate of an LCD module, the bolt fastening structure comprising:

a ~~plurality of~~ multi-overlapped layers of an edge portion of the overlapped-plate, wherein the multi-overlapped layer comprises part of the edge portion being folded over adjacent and consecutive part of the edge portion; ~~and~~

at least one screw hole formed through said ~~plurality of layers of plates~~ the multi-overlapped layer; and

a bump formed around the screw hole for increasing an effective thread length.

Claim 7 (canceled)

Claim 8 (currently amended): The bolt fastening structure of claim 6, further comprising at least one adhesive material layer disposed between two separate layers of the multi-overlapped layer ~~the said plurality of layers of the plate~~.

Claim 9 (currently amended): The bolt fastening structure of claim 8, wherein the adhesive material layer is a double-sided adhesive tape, an ~~adhesive material layer~~, adhesive glue or plastic rings.

Claim 10 (currently amended): The bolt fastening structure of claim 6, wherein the screw hole is formed by punching the ~~plurality of layers of the overlapped plate~~ multi-overlapped layer.

Claim 11(original): The bolt fastening structure of claim 6, wherein the plate is a metal plate.

Claim 12 (new): A bolt fastening structure, comprising:

an LCD module plate;

a multi-overlapped layer of an edge portion of a plate, wherein the multi-overlapped layer includes part of the edge portion being folded over an adjacent and consecutive part of the edge portion;

at least one screw hole formed through the multi-overlapped layer;

a bump formed around the screw hole for increasing an effective thread length; and

a bolt, fastening the LCD module plate and the multi-overlapped layer through the screw hole.

Claim 13 (new): The bolt fastening structure of claim 12, further comprising at least one adhesive material layer disposed between two separate layers of the multi-overlapped layer.

Claim 14 (new): The bolt fastening structure of claim 12, wherein the adhesive material layer is a double-sided adhesive tape, an adhesive glue or plastic rings.

Claim 15 (new): The bolt fastening structure of claim 12, wherein the screw hole is formed by punching the multi-overlapped layer.

Claim 16(new): The bolt fastening structure of claim 12, wherein the plate is a metal plate.
